

## Hybrid Inverter and Off-Grid Inverter

### Overview

A hybrid inverter is an all-in-one solution that generates power in the same manner as a standard solar inverter. However, it has additional fitted battery connections to store energy for later use. Moreover, hybrid inverters can feed back into the power utility grid. An off-grid inverter will draw power from a charged battery, convert the power from DC to AC, and output it into a household. It is essentially similar to a hybrid inverter, with one major difference: it cannot feedback power into the utility grid. Hybrid inverters can either be small or large; this works out cheaper, with the average inverter costing you between \$1,500 - \$8,000. The added plus regarding hybrid inverters is the possibility of gaining tax breaks or rebates when they are used to feed. Several factors determine the inverter best suited to your needs. These include the relationship with the utility grid, inverter sizes, cost, and battery compatibility. Furthermore, it's vital.
