

Pros and cons of non-domestic inverters

Overview

An inverter is a power electronic device that is not exclusively used for solar PV applications. Its most basic function is to convert DC (direct current) to AC (alternating current). The difference between the two and their specific applications are detailed below: 1. Direct Current – this is. There are 3 types of inverters today that are used today: central, string and microinverters. All of these perform basically the same. To be able to choose the best type, brand and model of inverters for your specific requirements, having a thorough understanding of the inverter's specifications is a. MPPT stands for Maximum Power Point Tracking. It is a function of inverters where they force the PV modules that are connected to them to.
