

What electricity does a commercial solar power station use

Overview

Solar panels absorb sunlight through silicon semiconductors and generate electricity as direct current (DC). This process is known as the photovoltaic effect. The electricity is sent to an inverter, which transforms the electricity from DC to AC (Alternating Current).

The early development of solar technologies starting in the 1860s was driven by an expectation that coal would soon become scarce, such as experiments by Augustin Mouchot. Charles Fritts installed the world's first rooftop photovoltaic solar array, using 1%-efficient selenium cells, on a New York City roof in 1884. However, development of solar technologies stagnated in the early 20th century in the face of the increasing a
